All other animals must be from a herd that is up to date with its current routine TB testing requirements.

SECOND document is a TB Animal Status Declaration Card. This is a legal requirement for all animals being moved. All animals entered must be accompanied in transit by a signed and dated TB animal Status Declaration Card showing a TB clear status in accordance with present legislation. Animal individual numbers must be included on the TB test sheet. These cards may be inspected at the unloading area.

For cattle being moved from 1 July 2012: A NAIT approved RFID tag will be mandatory for all movements of cattle, including day old calves. NAIT approved RFID cattle tags are white only. Please do not remove tags if cattle are identified with Animal Health Board or MINDA tags.

As of 1 July 2012 a secondary tag is no longer required under the new NAIT scheme.

All animals being exhibited at the Show including any participating in a hoof and hooks carcass competition come under the standard identification and ASD regulations. These cattle will require the NAIT approved RFID tag.

Where live cattle or deer form part of a trade display the exhibitor is responsible for:

- (i) Ensuring all stock have completed all TB testing requirements as per Animal Health Board testing regulations.

A \$5.75 levy is to be charged per in-milk cow, per show i.e if an in-milk cow is entered in more than one class at a show then the levy is still \$5.75. There is no levy on exhibiting young stock.

Biosecurity New Zealand

Mycoplasma Bovis Minimising the risk at shows and events

Mycoplasma Bovis is a bacterial disease that only affects cattle. The main way Mycoplasma Bovis spreads is through close and prolonged contact between cattle; and calves drinking milk from infected cows.

The risk of Mycoplasma Bovis spreading at A&P shows, calf days, rodeo and other events where cattle are present is quite low, but there is still a risk wherever cattle may mingle.

Event organisers need to take these risks into account and manage mitigations when deciding if to hold their event while Mycoplasma Bovis is being eradicated in New Zealand.

Animals on known infected farms are under movement control, and cannot be moved without MPI's permission. However through efforts to eradicate this disease we are still tracing movements of animals, and we expect there are some we haven't reached and tested. So it is important you take extra precautions to reduce your chances of spreading Mycoplasma Bovis.

What can exhibitors do?

- Animals on properties under any suspicion of exposure to Mycoplasma Bovis should not be transported to shows and events.
- Animals showing clinical signs of **ANY** disease should not be transported to shows, as per normal biosecurity practice.
- Make sure your cattle are tagged and registered with NAIT.
- Keep your NAIT movements up-to-date and accurate and record movements to and from the event. Guidance is available on nait.co.nz
- Practice good on-farm biosecurity and clean and disinfect outerwear, boots, and equipment before attending a show or event. On your return, clean and disinfect again before taking outerwear, boots and equipment back onto your farm. For more information refer to the guidance on mpi.govt.nz/bovis

What can exhibitors do?

- Ensure that exhibitors and participants are aware of your biosecurity and hygiene recommendations and their NAIT obligations.
- Animals without a NAIT tag should be denied entry and non-compliance reported to MPI.
- Ensure stalls are cleaned out before you put cattle in them, and after cattle are removed. Where possible, don't use the same stalls for cattle belonging to different competitors.
- Provide hand sanitizer for anyone likely to be handling the heads of animals from different owners.
- Any milking equipment used at the show should be cleaned and disinfected between uses on animals from different exhibitors.
- Give animal's individual water – do not allow animals to drink from shared troughs.
- Best practice is to separate animals of the same species where possible, to prevent the spread of any disease. This can be by separating animals with walkways, using empty pens, and using outriggers or double barriers where animals are in adjacent pens.
- Don't keep animals in show pens for long, to reduce stress and nose-to-nose contact.
- Keep animals from different herds separate and avoid their nose-to-nose contact.
- Ensure pens are secure, and that when animals are out they are tethered or being securely managed by somebody who is strong and skilled enough (this could mean supervising children with calves).
- It's an opportunity to teach people about on-farm bio-security. There's more on www.mpi.govt.nz/bovis.
